Lead in Community an Information Hub

Our Aim:

To produce a low maintenance website that showcases the achievements of the school.

The site will also provide useful information for parents and children about school activities and teaching and learning. Key Area The School as the Learning and as

Website

Where we were:

October 2004

- The school had a domain name but no website had been created.
- A website had been tentatively talked about but no firm ideas had been planned or discussed.

February 2005

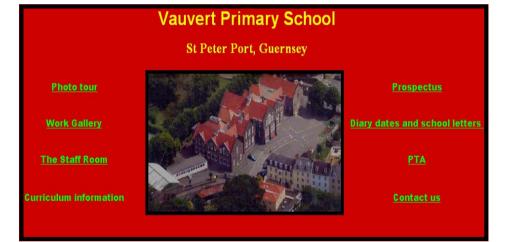

- A brief was put together highlighting the aims of our school website.
- Construction of the site was started after consultation with ICT advisors and research into other school websites.

Focusing: The school does not have a website. Developing: The school is planning a website.

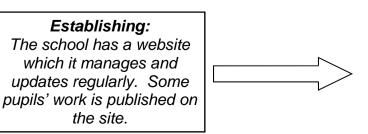

October 2005

•

- The school website features general information about our school, contact information including email and links to documentation for existing and prospective parents.
- Useful information such as diary dates and school letters are viewable or downloadable in .pdf format.

- PTA information and minutes are viewable and downloadable.
- Visitors can take a virtual tour of the school.
- Examples of children's work and photos of learning activities are displayed.

Where we are going:

The future of our site lies within making it a more useful tool to aid in bridging links between school and home work.

Hyperlinks to suitable websites associated with curriculum work need to be researched and added.

Open ended research projects associated with curriculum work could be added to promote independent learning.

Copies of homework sheets and learning resources could be added.

Enhancing: The school has a dynamic website with information, resources and links for parents. Pupils' work is regularly displayed and updated.

Where we are:
